- Albright reserve the right to change data without prior notice

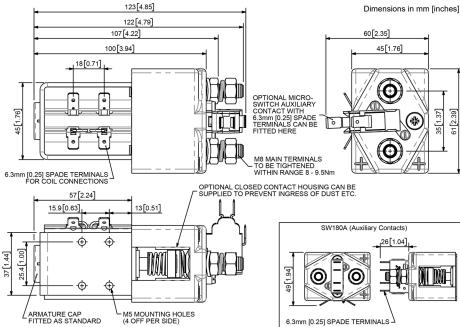

The SW180 has been designed for direct current loads, including motors as used on electric vehicles such as industrial trucks. Developed for both interrupted and uninterrupted loads, the SW180 is suitable for switching Resistive, Capacitive and Inductive loads.

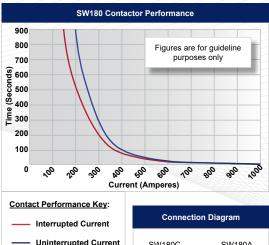

Interrupted current - opening and closing on load with frequent switching (results in increased contact resistance).

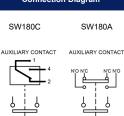

Uninterrupted current - no or infrequent load switching requirements (maintains a lower contact resistance).

The SW180 features single pole single throw, double breaking main contacts with silver alloy tips, which are weld resistant, hard wearing and have excellent conductivity. The SW180 has M8 stud main terminals and 6.3mm spade coil connections. It can be mounted via M5 tapped holes or mounting brackets - either supplied fitted, or as separate items. Mounting can be horizontal or vertical, when vertical the M8 contact studs should point upwards. If the requirement is for downwards orientation we can adjust the contactor to compensate for this.

SW180 Available Options				
General		Suffix		
Auxiliary Contacts	0	А		
Auxiliary Contacts - V3	0	С		
Magnetic Blowouts [†]	0	В		
Magnetic Blowouts - High Powered [†]	0	В
